RE: Southeast Rockford Groundwater Contamination Site
Groundwater Monitoring Report
Semi-Annual Monitoring Event – November/December 2017

Ms. Kirchner/Mr. Conrath:

Nationwide Environmental Services, Inc. (NES) is submitting the groundwater monitoring report presenting the analytical data and data interpretation summary for groundwater quality monitoring samples collected at the Southeast Rockford Groundwater Contamination Site (the Site) during the **November/December 2017** semi-annual monitoring event. The groundwater monitoring data obtained for the current reporting period will also be submitted in an MS Excel™ file separately via e-mail.

Please contact me at telephone (303) 232-2134 if you have any questions regarding the information provided or require any additional information.

Sincerely,

William B. Doterrer,
Sr. Project Manager

cc: Nadine Miller, City of Rockford

Enclosures

**Southeast Rockford Groundwater Contamination Site
Groundwater Monitoring Report
Semi-Annual Monitoring Event – November/December 2017**

February 2018

Nationwide Environmental Services, Inc.

**Southeast Rockford Groundwater Contamination Site
Groundwater Monitoring Report**

Overview

A semi-annual monitoring event was performed at the Southeast Rockford Groundwater Contamination Site (Site) in **November/December 2017** pursuant to the current Site monitoring schedule. The field sampling activity and analytical procedures utilized for the current monitoring event were performed in accordance with the revised Quality Assurance Project Plan (QAPP, 2017) and the amended Field Sampling Plan (FSP, 2017).

The principle intent of the Site groundwater monitoring program is: (1) to monitor the status of the affected aquifer within the Site extents relative to groundwater clean-up standards established under the Record of Decision (ROD OU2, 1995) issued for the site in 1995 and (2) to the extent possible under the groundwater monitoring program scope, monitor the influence of designated Site source areas and associated remediation activities on aquifer restoration goals.

The following report presents the results of the **November/December 2017** semi-annual monitoring event along with cumulative results for prior monitoring events conducted at the Site. This report also provides a comparison of groundwater monitoring data obtained during the current monitoring event to analytical data from the prior monitoring event to identify any notable change in groundwater conditions that may have occurred.

The results of the current groundwater monitoring event, pertinent Site information, and groundwater monitoring data are presented in the report as follows:

- **Figure 1** – Groundwater Monitoring Network and Source Areas
- **Figure 2** – Total Volatile Organic Compounds Concentration Trends
- **Table 1** – Summary of Groundwater Analytical Results (current monitoring event)
- **Table 2** – Cumulative Groundwater Analytical Results
- **Table 3** – Groundwater Elevations (current monitoring event)
- **Table 4** – Groundwater Monitoring Network
- **Appendix A** – Groundwater Monitoring Data Validation Summary & Laboratory Data Sheets (current monitoring event)
- **Appendix B** – Groundwater Monitoring Field Data Sheets (current monitoring event)

The monitoring well inventory for the Site presented in **Table 4** is revised, as necessary, to match the current condition of the individual monitoring wells comprising the Site monitoring well network. For example, repairs or maintenance performed for monitoring well locations that result in changes to the wellhead elevation will necessitate revisions to the monitoring well inventory. The next semi-annual monitoring event is scheduled for June 2018.

NES continues to coordinate efforts with IEPA to share groundwater data obtained from common monitoring well locations at the Site. NES is not aware of IEPA sample collection from Site monitoring locations for the current reporting period and no comparative Site data from IEPA is presented in this report.

Monitoring Event Results

The field sampling sheets presenting pertinent field information and site conditions for the current monitoring event are provided in **Appendix B** of this report. The following field conditions were noted to occur during the current semi-annual monitoring event:

- MW-101D was sampled with a portable low flow sampling pump. The permanent pump placed in the well is not operable due to a compromised bladder.
- MW-133C – The groundwater from this monitoring well exhibited an increase in field dissolved oxygen (DO) values during sampling to the point that the target criteria of 10% variation within the last three readings was not possible to achieve. No specific cause for the observed field DO measurements was identified.
- MW-203 was sampled with a portable low flow sampling pump. The permanent well pump installed in the well has been removed by an unknown party.
- Flush casings at MW-202 and MW-201 were noted to be in poor condition. Repairs to the well heads are planned prior to the next semi-annual monitoring event scheduled for June 2018.

The analytical results for groundwater samples collected during the current monitoring event are summarized in **Table 1**. Included in **Table 1** are the concentrations for the chemicals of concern (COC) identified in Section VI of the Site ROD OU2 and for vinyl chloride. Historical analytical results for groundwater samples collected from the Site monitoring network (by monitoring well location) are presented in **Table 2**. Validated laboratory data sheets and data quality summaries including relevant analytical quality assurance/quality control (QA/QC) criteria are provided in **Appendix A**.

Overall, total volatile organic compound (VOC) concentrations in groundwater have generally decreased across the Site since inception of the long-term monitoring program in March 1999. The ratios of parent VOC compound concentrations to associated breakdown product concentrations indicate biodegradation, comprising a component of natural attenuation, may be occurring at the Site. The reported detections of vinyl chloride and chloroethane in groundwater samples are further indicators that natural attenuation of parent compounds may be occurring at the Site.

A series of graphs depicting historical total VOC concentrations for select monitoring wells are presented on **Figure 2** to show total VOC concentration trends occurring at these monitoring locations. The monitoring locations used for comparison to historical analytical data were selected based on their proximity to designated source areas. Although the graphs depict analytical results from 1999 to the present, the evaluation presented in this report for total VOCs in groundwater at the Site is principally devoted to the identification of changes, if any, from the previous semi-annual sampling event conducted in **June 2017**.

The graphs on **Figure 2** reveal that fluctuations in total VOC concentrations in groundwater have occurred over the period that samples have been collected at the Site under the selected remedial action plan. The causal factors for VOC concentration variability are presumed to be source area remedial activities performed by others, variation in groundwater levels and flow paths, precipitation events resulting in aquifer recharge, etc. However, NES is not aware of any specifics that would allow an interpretation of the data, other than the general observations presented in this report.

Monitoring Data Review

The status of total VOC concentrations at certain monitoring well locations, relative to the previous monitoring event (**June 2017**), are summarized below. The noted monitoring well locations are located proximate to, or down-gradient from, identified source areas. The Site source areas are segregated by general geographic location within the Site for the purpose of this report.

East-Source Area 7

The majority of total VOC concentrations reported for groundwater monitoring locations near the Area 7 source area have generally decreased or remained relatively stable from the previous sampling event, except as noted. Relative increases, from the previous monitoring event, were noted for total VOC concentrations in water quality samples collected from monitoring wells MW-101A, MW-101B, MW-102A, MW-102B, and MW-133B. Several VOCs were reported above the maximum contaminant level (MCL) at the monitoring locations MW-101B, MW-101C, MW-102A, MW-102B, MW-133B, and MW-133C. During the previous monitoring event, VOCs were reported above MCLs at these same monitoring locations and MW-101D.

North-Source Areas 4, 9, 10, & 11

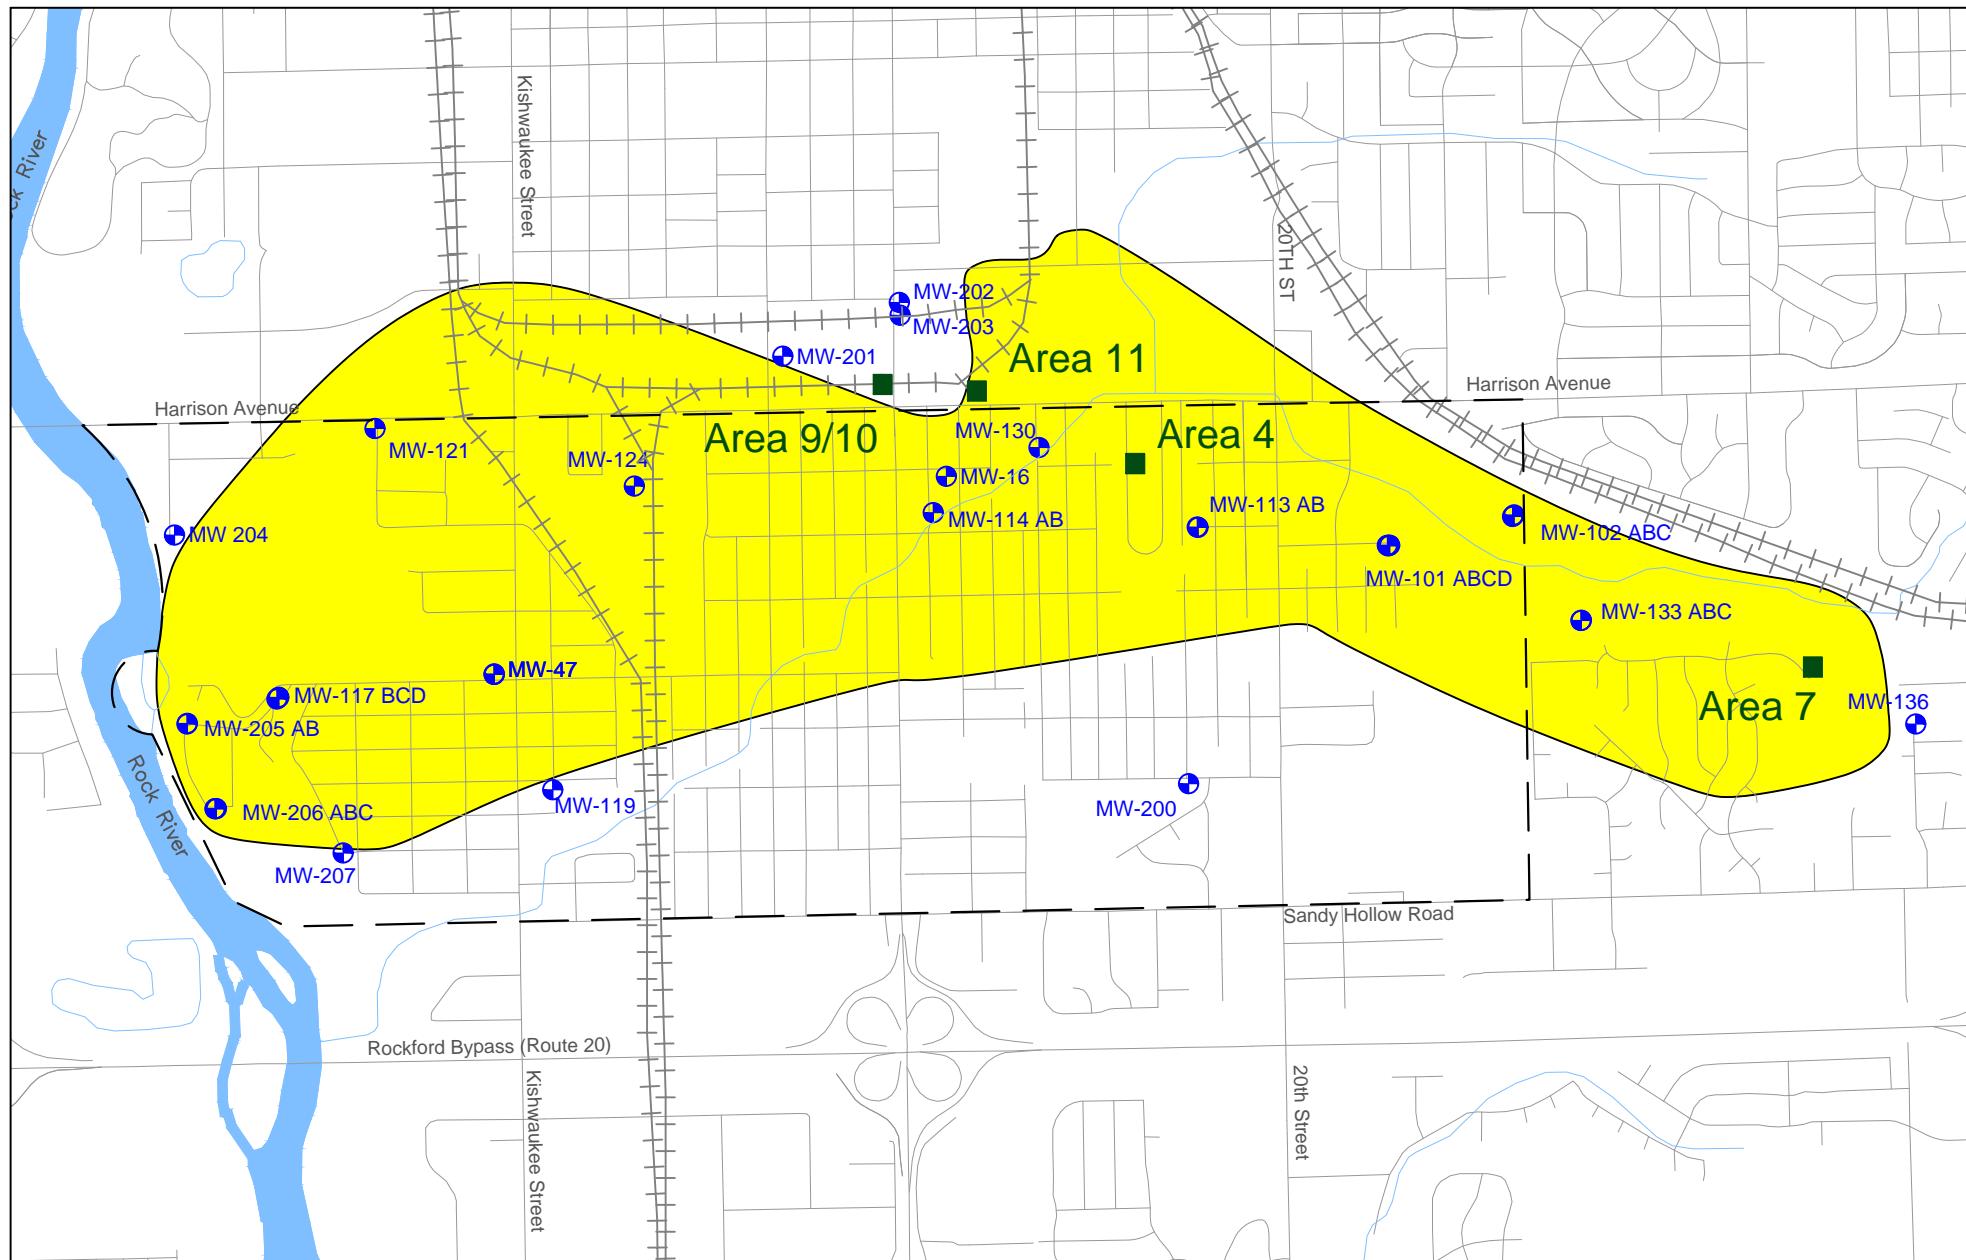

Evaluation of the analytical results for the current monitoring event resulted in the following observations. Relative increases, from the previous monitoring event, in total VOC concentrations were noted in the water quality samples collected from each of the monitoring wells in these areas, except for MW-16, MW-124, and MW-202. Several VOCs were reported above the MCL at monitoring locations MW-16, MW-113A, MW-113B, MW-121, MW-124, and MW-203. During the previous monitoring event, VOCs were reported above MCLs at these same monitoring locations, except MW-203.

Rock River

Evaluation of the analytical results for the current semi-annual monitoring event resulted in the following observations for the monitoring locations proximate to the Rock River. Relative increases, from the previous monitoring event, in total VOC concentrations were noted in the water quality samples collected from each of the monitoring wells in this area, except MW-47. Several VOCs were reported above the MCL at monitoring locations MW-117B, MW-117C, MW-117D, MW-204, MW-205A, MW-205B, MW-206A, MW-206B, and MW-206C. During the previous monitoring event, VOCs were reported above MCLs at these same monitoring locations.

Groundwater Monitoring Network Maintenance

No significant maintenance efforts occurred for the Site groundwater monitoring network since the **June 2017** monitoring event, other than routine inspections and recording observations of conditions requiring future attention. As noted in the monitoring event report, repair work for the flush casings at MW-201 and MW-202, and the dedicated pump at MW-101D is planned prior to the next semi-annual monitoring event scheduled for June 2018.

Table 2: Southeast Rockford Groundwater Contamination Site Cumulative Groundwater Analytical Results

Results reported in micrograms per liter ($\mu\text{g/l}$)

Highlighted results equal or exceed the Maximum Contaminant Level (MCL), where applicable

CFM	Chloroform
1,1-DCA	1,1-Dichloroethane
1,2-DCA	1,2-Dichloroethane
1,1-DCE	1,1-Dichloroethene
c1,2-DCE	cis- 1,2-Dichloroethene
t1,2-DCE	trans-1,2-Dichloroethene
MC	Methylene Chloride
PCE	Tetrachloroethene
1,1,1-TCA	1,1,1-Trichloroethane
TCE	Trichloroethene
VC	Vinyl Chloride
Total VOCs	Sum of Total Volatile Organic Compound Concentrations

- B Concentration is less than the reporting limit but greater than the instrument detection limit.
D Reported concentration is based on an analysis requiring a secondary detection limit.
E The associated value exceeds the calibration range.
J The reported concentration is estimated.
U Analyte was not detected at or above the reporting limit.

Sample Type reported as undiluted, investigative sample unless stated otherwise
Fld Dupe Field Duplicate

**Table 3: Southeast Rockford Groundwater Contamination Site
Groundwater Elevations**

Station Identification	Measurement Date	Water Level (ft TOC)	Groundwater Elevation (ft amsl)	Total Depth (ft TOC)	Comments
MW-16	11/24/17	21.11	706.80	62.36	
MW-47	11/24/17	40.61	695.05	54.49	
MW-101A	11/17/17	39.28	726.34	90.34	
MW-101B	11/17/17	40.26	726.36	153.74	collected field duplicate FD-2
MW-101C	11/17/17	40.26	726.22	174.89	Not sampled because no access to well.
MW-101D	12/03/17	43.09	721.87	212.72	MW-101D was sampled with a portable low flow sampling pump. The permanent pump wouldn't work due to broken bladder. Needs repair before next event.

Data Validation Summary & Laboratory Data Sheets

Data Quality Control Criteria Review Summary

SDG Number: 464756**Project Number: 1016-2****Site:** SE Rockford, 38th Event**Contractor Lab:** Pace (Grand Rapids, MI)**Validator:** Brian LaFlamme**Validation Date:** 01/23/18**Sample Matrix:** Water**Sample Date:** 12/02/17 – 12/03/17**Analytical Methods:** EPA SW-846 Method 8260B**Sample Designations:**

MW-101D	MW-102C	MW-201	FD-1 (MW-206C field duplicate)
MW-102A	MW-114A	MW-202	FD-2 (MW-101B field duplicate)
MW-102B	MW-114B	MW-203	Trip Blank

The analytical data were reviewed in accordance with the analytical methods, SW-846 validation guidelines, and the Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines. The review included comparing quality control (QC) values provided on the laboratory QC forms to method QC criteria. Review of the raw data was not performed.

Quality Control Summary

QC Review Item	VOA
Completeness	X
Case Narrative	X
Chain of Custody (COC) Forms	X
Sample Preservation	X
Holding Times	X
Laboratory Blank Results	1
System Monitoring Compounds (Surrogate) Results	X
Matrix Spike/Matrix Duplicate (MS/MSD) Results	2
Laboratory Control Sample (LCS) Results	3
Method Specific Quality Control (QC) Results *	X
System Performance	4
Field Quality Control Results #	5
Other	X

X Acceptable, no qualification necessary

NR Not required

See validation summary comment

NA Not applicable

*) The reviewer has indicated in the comments, if necessary, the method specific QC results included in the data package that were reviewed.

#) Field QC may include field duplicates, trip blanks, rinse blanks, field blanks, and equipment blank samples as required by project specific criteria.

Data for the above samples are:

Is action required by the Project Manager?

- Acceptable for use
- Acceptable for use as qualified
- Unacceptable for use

Yes No

Data Validation Summary Comments:

- 1. Laboratory Blank Results** – Acetone and Methylene Chloride were detected in the method blank for QC batch 10126 at concentrations less than the reporting limit. The following table provides the detected compounds and qualifiers applied to the investigate results, if necessary.

Compound	Method Blank Result ($\mu\text{g/l}$)	Affected Samples	Qualifier(s)
Acetone	2.7 J	Trip Blank	5 U
Methylene Chloride	0.42 J	MW-101B	5 U

Methylene Chloride was detected in the method blank for QC batch 10408. The following table provides the detected compounds and qualifiers applied to the investigate results, if necessary.

Compound	Method Blank Result ($\mu\text{g/l}$)	Affected Samples	Qualifier(s)
Methylene Chloride	0.32 J	MW-101B	5 U

- 2. Matrix Spike/Matrix Duplicate (MS/MSD) Results** – The MS recovery for 1,1,1-Trichloroethane, 1,1,2-Trichloroethane, 1,2-Dibromoethane, 1,2-Dichloropropane, 2-Butanone, 2-Hexanone, 4-Methyl-2-pentanone, Acetone, and Carbon Disulfide exceeded the limits for QC batch 10126. The detections reported for 1,1,1-Trichloroethane and 1,1,2-Trichloroethane were qualified as estimated “J”.

The MS and MSD recovery for Bromodichloromethane exceeded the limits for QC batch 10126. There were no reported detections for this compound in the investigative samples. Therefore, qualification is not necessary.

- 3. Laboratory Control Sample (LCS) Results** – The LCS recovery for Bromodichloromethane exceeded the limits for QC batch 10126. There were no reported detections for this compound in the investigative samples. Therefore, qualification is not necessary.
- 4. System Performance** – The corresponding opening continuing calibration verification (CCV) sample for Carbon Disulfide and Bromochloromethane for QC batch 10126 were outside acceptance limits. There were no detections for these compounds in the investigative samples. The non-detect results for both compounds were qualified “UJ”.
- 5. Field Quality Control Samples** – The relative percent difference (RPD) is not necessarily calculated if both the primary and duplicate results are not five times greater than the reporting limit. However, the RPD between the investigative and duplicate samples was less than or equal to 7% for the FD-2 pair and less than or equal to 15% for the FD-2 pair. Qualification is not necessary.

OVERALL ASSESSMENT OF DATA

The TriMatrix Work Order Report #464756 is 100 percent complete. The data usability is based on EPA's guidance documents. No problems were identified with reported data and analytical performance was within specified limits. The data are acceptable and meet the project's data quality objectives.

Data Quality Control Criteria Review Summary

SDG Number: 465042**Project Number:** 1016-2**Site:** SE Rockford, 38th Event**Contractor Lab:** Pace (Grand Rapids, MI)**Validator:** Brian LaFlamme**Validation Date:** 01/17/18**Sample Matrix:** Water**Sample Date:** 11/24/17**Analytical Methods:** EPA SW-846 Method 8260B**Sample Designations:**

MW-16	MW-124	MW-133C	MW-207
MW-47	MW-130	MW-136	Trip Blank
MW-119	MW-133A	MW-200	
MW-121	MW-133B	MW-204	

The analytical data were reviewed in accordance with the analytical methods, SW-846 validation guidelines, and the Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines. The review included comparing quality control (QC) values provided on the laboratory QC forms to method QC criteria. Review of the raw data was not performed.

Quality Control Summary

QC Review Item	VOA
Completeness	X
Case Narrative	1
Chain of Custody (COC) Forms	X
Sample Preservation	X
Holding Times	X
Laboratory Blank Results	X
System Monitoring Compounds (Surrogate) Results	X
Matrix Spike/Matrix Duplicate (MS/MSD) Results	X
Laboratory Control Sample (LCS) Results	X
Method Specific Quality Control (QC) Results *	X
System Performance	X
Field Quality Control Results #	2
Other	X

X Acceptable, no qualification necessary

NR Not required

See validation summary comment

NA Not applicable

*) The reviewer has indicated in the comments, if necessary, the method specific QC results included in the data package that were reviewed.

#) Field QC may include field duplicates, trip blanks, rinse blanks, field blanks, and equipment blank samples as required by project specific criteria.

Data for the above samples are:

Is action required by the Project Manager?

 Acceptable for useYes No Acceptable for use as qualified Unacceptable for use

Data Validation Summary Comments:

1. **Case Narrative Results** – A case narrative was not provided. However, there were no issues with the analysis of this sample delivery group (SDG).
2. **Field Quality Control Samples** – Two compounds were detected in the trip blank associated with the investigated samples for the SDG 465042. The following table provides the detected compounds and qualifiers applied to the investigate results, if necessary.

Compound	Method Blank Result ($\mu\text{g/l}$)	Affected Samples	Qualifier(s)
Acetone	4.0 J	No detections in investigative samples	n/a
Methylene Chloride	2.5	MW-16, MW-130, MW-133C MW-133B	1 U 2.5 U

¹ This investigate sample was already qualified because of a detection of methylene chloride in the method blank.

OVERALL ASSESSMENT OF DATA

The TriMatrix Work Order Report #465042 is 100 percent complete. The data usability is based on EPA's guidance documents. No problems were identified with reported data and analytical performance was within specified limits. The data are acceptable and meet the project's data quality objectives.

Data Quality Control Criteria Review Summary

SDG Number: 465417**Project Number:** 1016-2**Site:** SE Rockford, 38th Event**Contractor Lab:** Pace (Grand Rapids, MI)**Validator:** Brian LaFlamme**Validation Date:** 01/19/18**Sample Matrix:** Water**Sample Date:** 12/02/17 – 12/03/17**Analytical Methods:** EPA SW-846 Method 8260B**Sample Designations:**

MW-101D	MW-102B	MW-114A	MW-201	MW-203
MW-102A	MW-102C	MW-114B	MW-202	Trip Blank

The analytical data were reviewed in accordance with the analytical methods, SW-846 validation guidelines, and the Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines. The review included comparing quality control (QC) values provided on the laboratory QC forms to method QC criteria. Review of the raw data was not performed.

Quality Control Summary

QC Review Item	VOA
Completeness	X
Case Narrative	1
Chain of Custody (COC) Forms	X
Sample Preservation	X
Holding Times	X
Laboratory Blank Results	2
System Monitoring Compounds (Surrogate) Results	X
Matrix Spike/Matrix Duplicate (MS/MSD) Results	3
Laboratory Control Sample (LCS) Results	X
Method Specific Quality Control (QC) Results *	X
System Performance	4
Field Quality Control Results #	5
Other	X

X Acceptable, no qualification necessary

NR Not required

See validation summary comment

NA Not applicable

*) The reviewer has indicated in the comments, if necessary, the method specific QC results included in the data package that were reviewed.

#) Field QC may include field duplicates, trip blanks, rinse blanks, field blanks, and equipment blank samples as required by project specific criteria.

Data for the above samples are:

Is action required by the Project Manager?

 Acceptable for useYes No Acceptable for use as qualified Unacceptable for use

Data Validation Summary Comments:

- 1. Case Narrative Results** – A case narrative was not provided for this sample delivery group (SDG).
- 2. Laboratory Blank Results** – Three compounds were detected in the method blank for this SDG. The following table provides the detected compounds and qualifiers applied to the investigative results, if necessary.

Compound	Method Blank Result ($\mu\text{g/l}$)	Affected Samples	Qualifier(s)
Carbon Disulfide	0.62 J	MW-102A, MW-102B, MW-102C MW-114B, MW-201, MW-203 Trip Blank	5 U
1,4-Dichlorobenzene	0.25 J	MW-102A, Trip Blank	1 U
trans-1,2-Dichloroethene	0.27 J	MW-102B	1 U

- 3. Matrix Spike/Matrix Duplicate (MS/MSD) Results** – The MS recovery for carbon disulfide exceeded the QC limits in this SDG. There were no issues with the laboratory Control Sample (LCS) and the affected investigative samples were already qualified based on the method blank. Therefore, additional qualification is not necessary.
- 4. System Performance** – The corresponding opening continuing calibration verification (CCV) sample for carbon disulfide for this SDG was outside acceptance limits. Positive results for carbon disulfide were already qualified for method blank contamination. The non-detect results are qualified “UJ”.
- 5. Field Quality Control Samples** – Three compounds were detected in the trip blank associated with the investigated samples for this SDG. Positive results for carbon disulfide and 1,4-dichlorobenzene were already qualified for method blank contamination. Acetone was not detected in any investigated samples. Therefore, qualification is not necessary.

OVERALL ASSESSMENT OF DATA

The TriMatrix Work Order Report #465417 is 100 percent complete. The data usability is based on EPA's guidance documents. No problems were identified with reported data and analytical performance was within specified limits. The data are acceptable and meet the project's data quality objectives.

Remarks: (well condition, maintenance, etc...)

MW-101D was sampled with a portable low flow sampling pump. The permanent pump wouldn't work due to broken bladder. Needs repair before next event.
